

UPSSO

SECURE YOUR REMOTE WORKFORCE WITH SSO AND MFA

UPSSO provides a single identity and multi-factor authentication for your enterprise resources such as Applications, VPNs, Devices, and more.....

<https://www.upsso.net/>

UPSSO protects your devices, VPN, and applications by providing a single identity and multi-factor authentication such as E-Mail, SMS, Google Authenticator, and Hardware Devices. This product adds an extra layer of security to your sensitive enterprise resources, also making sure the right people have access to them.

With UPSSO, we can implement MFA for devices such as CISCO ASA VPN, Open VPN, Check Point, Palo Alto, Linux OS, and many more. We can also implement MFA for applications such as CyberArk, Salesforce, G Suite, and many more. The solution achieves this by supporting RADIUS and SAML protocols.

DEVICE AND VPN INTEGRATION

UPSSO integrates with most of the devices such as VPNs, Routers, Firewalls & Linux Operating systems. It achieves this by supporting the RADIUS protocol. Here are some of the well-known devices for which we can implement MFA/SSO with UPSSO easily.

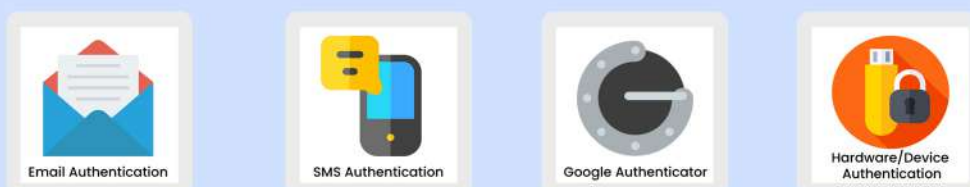

APPLICATION INTEGRATION

UPSSO integrates with most of the enterprise applications such as CyberArk, Salesforce, G Suite, Sugar CRM, AWS Cognito Federation, etc. UPSSO does this by supporting the SAML 2.0 protocol. Here are some of the well-known applications for which we can implement Multi-factor Authentication/SSO with UPSSO easily.

MULTI-FACTOR AUTHENTICATION

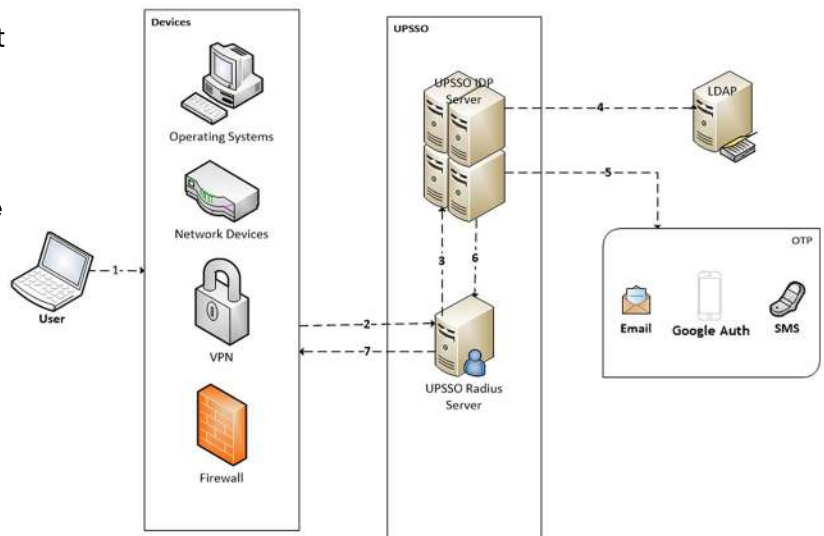

The product supports multiple types of MFA methods such as E-Mail, SMS, Google Authenticator, and Hardware Authentication devices. UPSSO makes it easy & secure to configure the MFA modes.

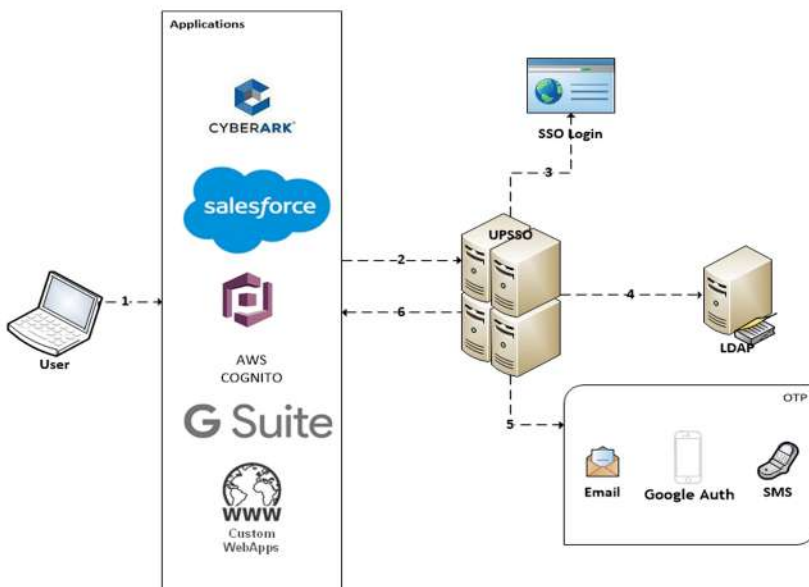

HOW IT'S WORK

SSO & MFA FOR DEVICES

1. The user logged into the RADIUS supported device using Active Directory credentials.
2. The device sends the Authentication Request to UPSSO Radius Server.
3. Radius Server sends the credentials to the UPSSO IDP server.
4. IDP server authenticates the user against the Active Directory server.
5. IDP server sends the One Time Password to the user.
6. Radius server sends an Authentication Challenge request to the device, which will prompt the user to enter the OTP he/she received. Radius server will verify the OTP by sending it to the IDP server.
7. Upon successful OTP verification, the user will be allowed to log into the device.

SSO & MFA FOR APPLICATIONS

1. User accessing a Service Provider (Such as Salesforce) using his browser.
2. Service Provider sends a SAML Request to UPSSO IDP Server.
3. The IDP will ask the user to login if not already.
4. IDP will validate the user against Active Directory.
5. IDP will send the One Time Password to the user.
6. Upon successful OTP verification, IDP will send the SAML Response Service Provider.
7. Upon receiving the proper Response from IDP, SP will allow the user to login.

ABOUT COMPANY

UPSSO is an SSO/MFA product developed by Unique Performance to secure SAML supported applications and RADIUS supported devices.

Unique Performance – Your trusted partner in Cyber Security

For more than eight years, Unique Performance, headquartered in Bangalore, has been helping organizations and governments to manage and protect their digitally managed assets.

HERE'S SOME QUICK INFO ABOUT UNIQUE PERFORMANCE

- Founded in 2010 with a vision to become a market leader in the cyber security & communication domains.
- Headquartered in Bangalore, India.
- We are the top reseller for CyberArk solutions in the Indian region.
- We have been awarded the best reseller by CyberArk in the Indian region.
- Having a strong 20+ member team comprising cyber security engineers, communication engineers and software developers.
- Having 8 CyberArk Certified Engineers
